

**Qualifications We're having Part 2  
 Fire Protection Equipment  
 Engineers' Class B Group 7**

In order to inspect and maintain a fire-alarm, you must have a license "Fire Protection Equipment Engineers' Class B Group 7".

For example, a school building made of a wall containing a wire mesh must install a fire-alarm.

"Fire Protection Equipment Engineers' Class B Group 7".

I'm looking over the loudness of the alarm sound emitted by the electric leakage fire-alarm. I was asked by Ms. Maizono to do this work.

It's very noisy. What are you doing, Tsukuru-chan?

**Beep!**  
**Beep!**

**Whew!**

**NOW, NOW.**

You are too familiar with a fire-alarm to be a maid.  
 Btw, I have a drink. Do you drink it?

OK. I'm thirsty after finishing a work. Oh well! I'm not Ms. Maizono's maid.

Ah, what you were doing a while ago was that check.

I use this sound level meter to measure the alarm sound 1m away from the fire-alarm. In doing so, the alarm sound must be at least 70 dB.

Continue to next qualification...

But your true feelings are glad, huh?

**Nooooo!!**

80dB... If they are fire-alarms, they'll be passed.

**I'm embarrassing, so don't make such bottle!**

This is a special bottle I made. You can suck juice from the hose.

Thanks... But I hesitate to drink juice from this bottle.

**C'mon!**
