

Your socks are interesting, but in what situations do you use them?

**Dangle**

I marked the scale on the back side of these socks.

So, these can be used as a measure when turned inside out.

Her socks will never hit....

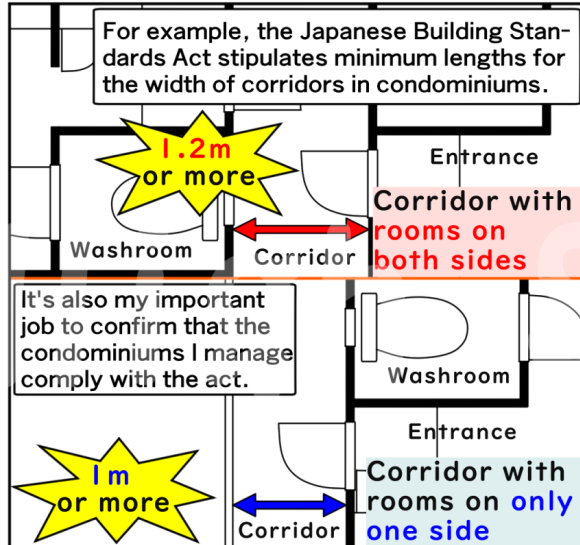

I'm going to make a lot of money with these socks.

What kind of invention is it?

I invented *loose socks* (baggy socks) that combine practicality.

Qualifications of our members (16)  
Licensed Representative of  
Condominium Management Company

For example, the Japanese Building Standards Act stipulates minimum lengths for the width of corridors in condominiums.

**1.2m or more**

It's also my important job to confirm that the condominiums I manage comply with the act.

**1m or more**

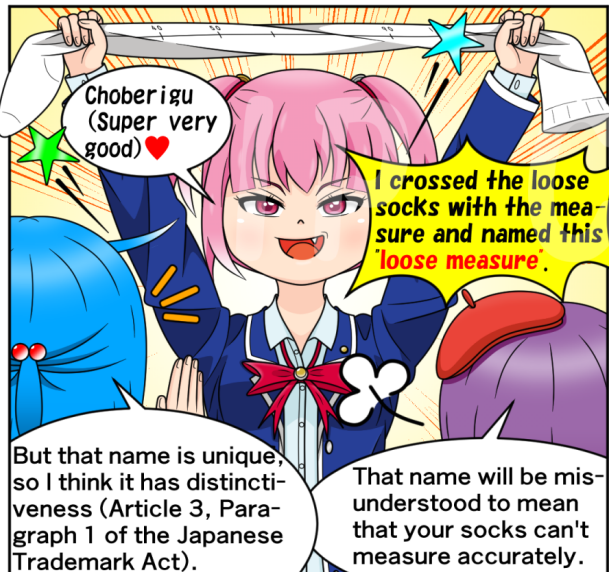

My job is to support condominium management associations and management company when they enter into management contract.

I'm "**Licensed Representative of Condominium Management Company**".

Simply put, I'm an expert in managing condominiums.

Choberigu (Super very good) ♥

I crossed the loose socks with the measure and named this **'loose measure'**.

But that name is unique, so I think it has distinctiveness (Article 3, Paragraph 1 of the Japanese Trademark Act).

That name will be misunderstood to mean that your socks can't measure accurately.

I see.

Btw, have you decided on the brand name of your socks? If so, let's register it as a trademark.

If you wear my socks, you can measure stylishly without having a measure.
