

I have "**Maritime II - Category Special Radio Operator**" license, so I can handle radar installation. Radar emits radio waves from this antenna to measure the distance and direction of a target.

Part23: Maritime II - Category Special Radio Operator

It's a radar antenna. The radar will tell me whether she is approaching our club's room or not★

What do you wear on your head?

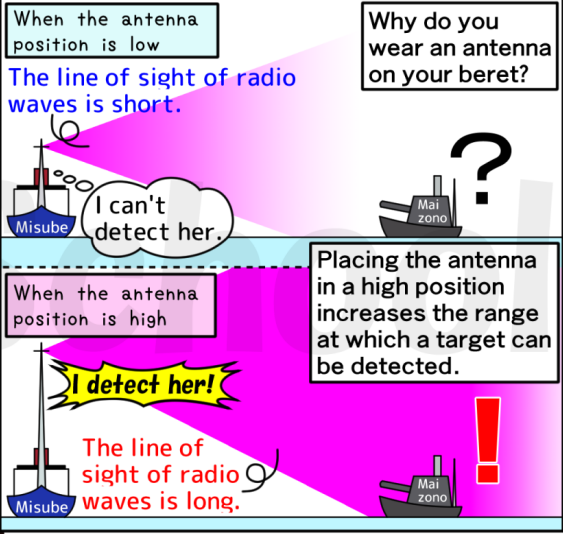

Ms. Maizono is looking for you. You don't have good grades in chemistry, so she's going to tutor you strictly.

Why the hell are you here, teacher!?

Misube-chan! You haven't detected her.

That method alone won't allow you to accurately detect me.

This posture is hard!!

Eek!!

Ships are generally equipped with two radars high and low on the mast, like her posture.

By having two antennas, you can increase the detection range and reduce blind spots.
