

This license is required to maintain boilers of a certain size. An example of such a boiler is a steam boiler with a heat transfer area of more than 3 m<sup>2</sup>.

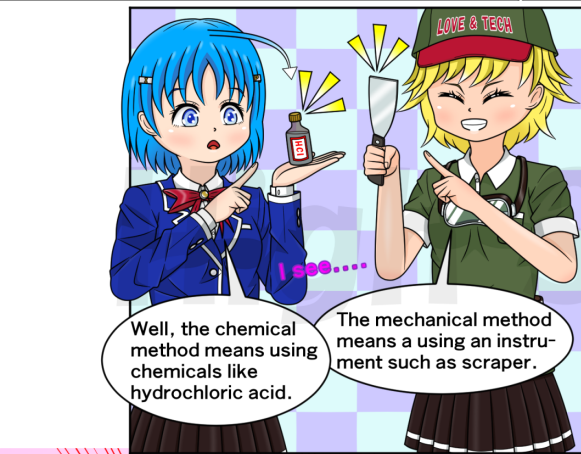

**I have a license as 'Boiler maintenance technician'.**

Ms. Maizono said she'd pay us a reward, so I came here too.

Misube-chan said she'd come here after preparing what you asked for.

I thank you for coming to help clean our school's boiler.

~ Part25 ~  
Boiler maintenance technician's license

Well, the chemical method means using chemicals like hydrochloric acid.

The mechanical method means a using an instrument such as scraper.

Btw, how do we clean the boiler?

There are two methods for cleaning a boiler: **mechanical** and **chemical**.

I was planning to spray paint a doll modeled after you today.

**Don't make such doll!**

The clothes Beret uses for making dolls and the clothes for cleaning the boiler are exactly the same.

Don't worry

I prepared our cleaning clothes.

Thank you for waiting.

If we clean in our school uniforms, they'll get dirty.
